

## Basic steps

- Follow the video at <http://www.embarcadero.com/starthere/xe5/index-ios.html>
  - This used to be at <http://www.embarcadero.com/starthere/xe5/index.html> but that is now the Android starting page

## Xcode

- Delphi uses Xcode for
  - Deployment
  - Debugging
- Xcode 4 and higher work fine

## PA Server

- All iOS and OSX debugging goes through PA Server
- Install from  
C:\Program Files (x86)\Embarcadero\RAD Studio\12.0\PAServer
  - Once:
    - Copy .pkg to Mac
    - Run .pkg
  - Every time you want to debug
    - Start “PA Server 4 “
    - Enter your “administrator” credentials
    - Enter a PA Server password

## When it fails

- [C:\Program Files \(x86\)\Embarcadero\RAD Studio\12.0\bin\DeploymentWizard\ios\en\runosdevicefailedhelppage.html](C:\Program Files (x86)\Embarcadero\RAD Studio\12.0\bin\DeploymentWizard\ios\en\runosdevicefailedhelppage.html)
